

THE NEWEST ADDITION TO THE KEY KOP LINE

A compact ring, sized and balanced to allow the use of belt clips. Ideal for larger keys, such as Folger-Adams or for smaller more common keys.

Just a few of the places where
Key Kops are in use:

Delta Airlines
Pinkerton Security
Pepsi and Coca Cola
Brinks and Loomis-Fargo
Florida State University and Texas A & M
GM, Ford and Chrysler
The Mayo Clinic And Bellevue Hospital
Hon-Dah Casino and Lady Luck Casino
Boeing/Hughes Aircraft
Tennessee Valley Authority
Pine Bluff Arsenal
State Prisons in:
OH / PA / LA / CA / MO / MS / MD / HI
Broward Correctional Institution
US State Department
United Nations
and Many, Many More

The Perfect Accessory A TACTICAL BELT CLIP

Ideal for use with 2" Uniform Belts.

**Keys cannot be grabbed
or accidentally slide off**

Heavy Gauge Welded Plated Steel

The User threads the belt through the clip. The rings will just snap in place but the Positive Locking Feature Requires the User to depress the locking finger while removing the key ring.

No other locking key ring offers a wider selection of locks from which to choose. Our solid metal housing offers greater security than plastic bodied units.

Compared to other designs, our cables are a heavier gauge and sheathed with stainless steel spring overwrap to provide longer service.

Key Kops are warrantied for one year against defect in materials or workmanship. The warranty does not cover units which have been abused, mis-used, or inappropriately applied. Units returned under warranty will be repaired or replaced at our discretion.

KEY KOP I

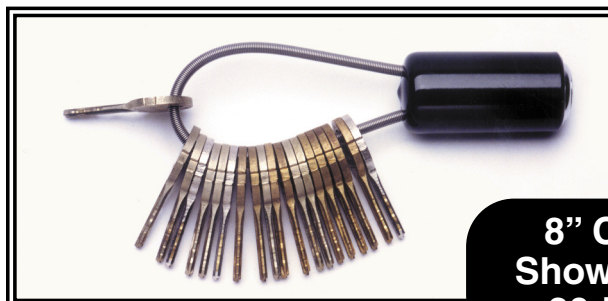

DESIGNED FOR FLEXIBILITY WITH SECURITY IN MIND

The cable style is a 7 over 7 stainless steel aircraft cable, nylon coated, and then covered with a stainless spring steel cover to offer protection from abrasion and to minimize kinking of the cable. One end unlocks, while the other end is captive, preventing keys being dumped while being serviced. Cable terminals are recessed within the body to minimize break points. The bodies are machined from solid aircraft grade aluminum bar, and are covered by colored polyurethane boots. This offers a way to code groups of keys to specific functions, and offers some protection for the body of the unit. Available with a choice of locks and in several lengths.

Custom lengths available on special order.

KEY KOP II

DESIGNED FOR DURABILITY AND EASE OF USE

The shackle style uses a 5/32nd" Stainless Steel rod formed into a 4" circle, 2-1/2" circle or into loops that are 1-1/2", 3", 5" long and 1-1/4" wide. The shackle withdraws completely from the body, so keys may be removed from either end. Shackles are interchangeable and shackles may be bought separately for maximum flexibility in arranging sets to order.

The bodies of both have colored polyurethane boots to offer added protection for the body and lock assembly. The colors also allow users to color code sets of keys for specific functions.
